EDUCATION

McMaster University

Bachelor of Software Engineering (Co-op), Minor in Mathematics

May 2028

Hamilton, ON

EXPERIENCE

PointClickCare

May 2026 - Present

Software Engineer Intern | *Java, Spring Boot, Kotlin, TypeScript*

Toronto, ON

- Migrated a legacy **SQL stored procedure** to **Java code** within the core **EHR** platform, using **AI-assisted workflows** to validate behavioral equivalence, reducing unnecessary database round trips by **25%**
- Performed load performance testing with **JMeter**, simulating **100+** concurrent requests and monitoring average and P90 response times via **AppDynamics/Grafana** dashboards

PointClickCare

Sept 2025 - Dec 2025

Software Engineer Intern | *Java, Spring Boot, Kotlin, TypeScript, React*

Toronto, ON

- Redesigned **Java/Spring Boot** assessment report generation to parse authoring data and print only completed fields via **JasperReports JRXML** templates, cutting page count by **50%+** and reducing printing costs
- Diagnosed and fixed recurring defects in patient assessment scheduling within the core **Java EHR** platform, tracing root causes through **legacy** code and validating fixes with **JUnit** regression tests
- Built new customer-facing features behind **feature flags**, designing **React/TypeScript** front-end components and integrating them with **Kotlin** backend services to enable safe rollout of in-progress functionality

Jiyash Auto

May 2025 - Aug 2025

Full-Stack Developer | *SvelteKit, TypeScript, SQLite, Docker, Nginx*

Cambridge, ON

- Engineered a **full-stack** dealership platform with **SvelteKit 5** and **SQLite**, improving page loads by **75%+**
- Built a secure **admin dashboard** with **HMAC-based session authentication** and automated **WebP** compression, cutting image file sizes by up to **90%**, with filtering and visibility controls
- Designed **REST API** endpoints with **SvelteKit** form actions for vehicle CRUD operations, image lifecycle management, and orphaned file cleanup
- Containerized the application with **Docker** and deployed via **Nginx** reverse proxy on a self-managed **Ubuntu VPS**, with **GitHub Actions CI/CD** for automated builds on push

PROJECTS

Game Chat Bridge | *Python, TypeScript, React, Vite.js, FastAPI, PostgreSQL, Node.js*

[Website](#) | [Repository](#)

- Built a real-time, cross-platform **chat bridge** relaying **230K+** messages bidirectionally between two Minecraft guild chats and Discord using **discord.py** and **Mineflayer**, serving **130+** linked accounts
- Developed a **FastAPI & React/TypeScript** admin panel with **Discord OAuth2**, **JWT**-based role permissions, live **WebSocket** log streaming, and bot process control for a **pm2**-managed production deployment
- Designed a **PostgreSQL** schema supporting member tracking, message leaderboards, and an automated rank-promotion system that has driven **570K+ Hypixel API** calls at a **99%+** success rate

Patient Discharge Assistant | *Python, JavaScript, React, Vite.js, Qdrant, Azure OpenAI, Docker*

- Built a **full-stack AI web app** using **Vite.js** and **Python**, parsing discharge documents with **Azure OpenAI** embedding model, enabling chat-bot based Q&A leading to improved patient review times by **70%+**
- Extracted patient discharge data with **90%+** accuracy and stored embeddings in user-scoped **Qdrant** vector database for sub **500 millisecond** retrieval
- Implemented Guardrails to reduce PHI leakage during data ingestion and chatbot interactions

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL, HTML/CSS, Kotlin

Frameworks/Libraries: React, SvelteKit, Vite.js, FastAPI, Spring Boot, Node.js, JUnit, pytest

Databases & Tools: PostgreSQL, MongoDB, SQLite, Qdrant, Docker, Nginx, Git, GitHub Actions, Linux, JIRA, Confluence, Azure, Figma, AppDynamics, Grafana, Claude Code

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Software Development, Databases, Software Testing
