Education

McMaster University Sept 2022 - May 2028
Bachelor of Software Engineering (Co-op), Minor in Mathematics Hamilton, ON

- **Relevant Coursework**: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Software Development, Databases, Software Testing

Technical Skills

Languages: Python, Java, TypeScript, JavaScript, SQL, HTML/CSS, Kotlin
Frameworks/Libraries: React, SvelteKit, Vite.js, FastAPI, Spring Boot, Node.js, JUnit, pytest
Databases & Tools: PostgreSQL, MongoDB, SQLite, Qdrant, Docker, Nginx, Git, GitHub Actions, Linux, JIRA, Confluence, Azure, Figma, AppDynamics, Grafana, Claude, Codex

Experience

PointClickCare May 2026 - Aug 2026
Software Engineer Intern | *Java, Spring Boot, Kotlin, TypeScript* Toronto, ON

- Migrated legacy **SQL stored procedures** to **Java** code within the core EHR platform, using **AI-assisted tools** to validate behavioral equivalence, reducing unnecessary database round trips by **25%**
- Diagnosed and fixed **10+** recurring defects in patient assessment scheduling within the core **Java EHR** platform, tracing root causes through **legacy** code and validating fixes with **JUnit** regression tests
- Engineered a **Claude** skill to automate full developer workspace setup and dependency installation, reducing onboarding time by **70%+** and eliminating manual configuration steps across the team

PointClickCare Sept 2025 - Dec 2025
Software Engineer Intern | *Java, Spring Boot, Kotlin, TypeScript, React* Toronto, ON

- Built customer-facing features behind feature flags, designing **React/TypeScript** components integrated with **Kotlin** backend services, enabling safe staged rollout of in-progress functionality across the platform
- Redesigned assessment report layout and components in **Java**, restructuring **JasperReports JRXML** templates to parse authoring data and render completed fields, cutting page count by **50%+** and reducing printing costs
- Created **JMeter** load tests and **SQL** data-seeding scripts to stress-test backend services under 100+ concurrent requests, verifying backend performance improvements in response times and CPU/memory efficiency

Jiyash Auto May 2025 - Aug 2025
Full-Stack Developer | *SvelteKit, TypeScript, SQLite, Docker, Nginx* Cambridge, ON

- Engineered a **full-stack** dealership platform with **SvelteKit 5** and **SQLite**, improving page load times by **75%+**
- Containerized the platform with Docker, and built a GitHub Actions CI/CD pipeline automating VPS deployments, including daily database backups via cron for fast disaster recovery
- Designed **REST API** endpoints with **SvelteKit** form actions for vehicle CRUD operations, image lifecycle management, and orphaned file cleanup, preventing unbounded storage growth

Projects / Hackathons

Game Chat Bridge | *Python, TypeScript, React, Vite.js, FastAPI, PostgreSQL, Node.js* *Website* | *Repository*

- Built and maintained a real-time, cross-platform chat bridge relaying messages bidirectionally between two game guild chats and Discord using **discord.py** and **Mineflayer**, serving **250+** active users
- Developed a **FastAPI/React** admin panel with Discord OAuth2 for remote bot control and account linking
- Designed a **PostgreSQL** schema to track member progression, powering an automated system that promotes/demotes guild members in real time, eliminating manual rank management across **250+** linked accounts

Patient Discharge Assistant [Hackathon] | *Python, FastAPI, LangGraph, React/TypeScript, Qdrant, Azure OpenAI*

- Led a team of **5** using **spec-driven development** with **Speckit** to architect a full-stack AI app with **FastAPI**, **LangGraph**, and **React/TypeScript**, improving patient discharge review times by **70%+**
- Assembled a **LangGraph** orchestrated ingestion pipeline extracting, redacting, and embedding discharge documents with **90%+** accuracy, storing vectors in per-user **Qdrant** collections for sub **500 millisecond** retrieval
- Implemented configurable guardrails including PHI filtering, prohibited-advice detection, disclaimer enforcement on **Azure OpenAI** powered chat to ensure safe, audit-ready patient guidance
